Trinity launches specialist hydraulic projects

BY OUR BUSINESS BUREAU

ABU DHABI: Trinity Holdings, a leading provider of engineering solutions in the UAE, announced the launch of its Hydraulic Projects Division at the Abu Dhabi International Petroleum Exhibition and Conference (ADIPEC), on Sunday.

The specialist division will offer turnkey solutions in hydraulic technology applications for the growing energy industry in the region. "With the increased drilling activities in the region, there is a surge in demand for offshore and onshore fluid power support services that

keep critical operations in motion. The new division will enable Trinity to offer specialised solutions in close proximity to major oil & gas companies and rig refurbishment yards," said Pratik Shah, Executive Director, Trinity Holdings.

The comprehensive services offered by the division include hydraulic system design, electronic interfacing, engineering consultancy, manufacturing, installation, refurbishment and upgrades. In addition, Trinity's experienced workforce of engineers and project managers will offer continual support, advice and training to high standards in quality, health

& safety, at various stages of the project.

The new division aims to be a one-stop shop in providing a full range of solutions from initial planning and design to manufacturing and installation of hydraulic systems.

"At Trinity, we consider ourselves as an engineering partner offering customized solutions to our clients. Leveraging our expertise in mechanical engineering and fluid power system competence, we are confident that we can be an integral part of the productivity and operations of our customers' business," commented Ashley Fernandez, General Man-

ager, Hydraulic Projects Division. Trinity's Hydraulic Projects Division will cater to various clients including oil & gas companies, onshore & offshore drilling contractors, ship & rig repair yards, onshore & offshore service contractors and dredging contractors among others.

TRINITY LAUNCHES HYDRAULIC PROJECTS

HALL 10, STAND 10362 Trinity Holdings, a leading provider of engineering solutions in the UAE, has launched a Hydraulic Projects Division ADIPEC 2013.

The specialist division will offer turnkey solutions in hydraulic technology applications for the growing energy industry in the region.

“With the increased drilling activities in the region, there is a

surge in demand for offshore and onshore fluid power support services that keep critical operations in motion. The new division will enable Trinity to offer specialised solutions in close proximity to major oil and gas companies and rig refurbishment yards,” says Pratik Shah, Executive Director, Trinity Holdings.

The comprehensive services offered by the division include hydraulic system design, electronic interfacing, engineering consultancy, manufacturing, installation, refurbishment and upgrades. In addition, Trinity’s experienced workforce of engineers and project managers will offer continual support, advice and training to high standards in quality, health and safety, at various stages of the project.

ONE-STOP SHOP

The new division aims to be a one-stop shop in providing a full range of solutions from initial planning and design to manufacturing and installation of hydraulic systems.

“At Trinity, we consider ourselves as an engineering partner offering customised solutions to our clients. Leveraging our expertise in mechanical engineering and fluid power system competence, we are confident that we can be an integral part of the productivity and operations of our customers’ business,” says Ashley Fernandez, General Manager, Hydraulic Projects Division.

Pratik Shah, Executive Director, Trinity Holdings

PowerDrive Archer
HIGH BUILD RATE RSS

High build rate RSS eliminates NPT, saves 4 days offshore Asia.

PowerDrive Archer RSS eliminated nonproductive time in unconsolidated formations offshore Asia, reducing drilling time by 4 days and saving USD 4.5 million. By maintaining full trajectory control, the high build rate RSS drilled six low-tortuosity lateral wells, steering through drop zones where other RSSs had been unable to hold the desired angle.
